

when you're working **flat** out,
the last thing you need is a **flat** battery

**Safely charge tool
batteries on site
with PowerStor™**

- » SAFELY CHARGE TOOL BATTERIES ON SITE IN A SINGLE, EASILY MANAGED UNIT
- » LOCKABLE AND SECURE WALK-IN CONTAINER HELPS REDUCE TOOL THEFT
- » STAND-ALONE AUTOMATIC FIRE SUPPRESSION SYSTEM

INTEGRAL SECURITY IS AT THE HEART OF THE DESIGN, FROM THE FOLDED SHEET STEEL CONSTRUCTION TO THE TWIN 5-LEVER DEADLOCKS. KEEP YOUR BATTERIES SAFE WHILST CHARGING.

Safely charge power tool batteries on site with PowerStor, reducing the impact should a battery fire occur on site.

For your safety, a stand-alone fire suppression system comes as standard. Automatically activated by heat or flames, this helps to protect the unit and its contents at all times.

Fork pockets & crane lifting eyes enables you to easily reposition this unit as required - isolate it to minimise fire risk, or keep it right by the site offices for easy management.

With 32 individual sockets spread over 5 shelves, there's plenty of charging points for everyone on site. Powered by a single 32A / 230V supply, this unit arrives preassembled to help you get started easily and quickly.

PowerStor™ the features and benefits

-  Get started easily with this plug and play charging unit
-  32x individually switched 230V power sockets with RCD protection
-  The 5 fixed shelves help keep contents organised
-  Powered by a single 32A / 230V commando plug
-  Our signature 5-lever deadlocks keep the unit secure
-  Fork pockets and crane lifting eyes for simple repositioning
-  Hard wearing steel checker-plate on the floor to handle high foot traffic
-  Weatherproof unit sheds rainwater to keep contents dry and safe
-  Built-in fire suppression system to reduce the risk should a fire occur within the unit

The consequences of a fire can be devastating for any workplace. The Firechief PyroCloud is a fixed fire suppression unit that is fitted within the PowerStor and detects a fire at a very early stage and will extinguish it in just a few seconds, including lithium-ion battery fires.

The PyroCloud is a fully automatic and independent system of activation and does not depend on electrical power supply. It is a non-toxic fire suppressant and 15 years maintenance free.

How does it work?

PyroCloud is a non-pressurised system and after activation, an aerosol cloud is generated, which expands volumetrically, flooding the PowerStor and extinguishing the fire.

The active substances of the aerosol is solid micro particles which fill the compartment and attack the combustion process at a chemical level. As a result, the flames are instantly knocked down and the energy removed from the fire.
